

Ideal for oversized logs

Many times valuable logs are too few or too awkward to take to an industrial sawmill. Or other portable sawmill solutions are too awkward or expensive to be taken to the logs. The Big Mill System system is primarily meant for processing of oversized logs but it can deal with logs of practically any size and shape.

Timberjig, Article code 4900-000-1000

The Timberjig

The Timberjig is a vital ingredient in the Big Mill System, but not only that. Attached to a suitable chainsaw the Timberjig becomes a suitable sawmill in its own right. This feature is described in a separate brochure:

Big Mill Basic

Components:

Timberjig, adjustable guide rail supports and guide rail 2.75 m.

Big Mill Basic includes a 2.75 m guide rail and two guide rail supports made of steel to be attached to each one end of the log. The system is suitable for logs up to 90 cm diameter. Length extensions of 0.5m, 1.0m and 2.75m are available. It is easy to square the log into a beam or cut it into board dimensions of your choice.

Big Mill Basic, Article code 4900-007-1000

Big Mill PRO, Article code 4900-007-2000

Big Mill Pro

Components: 1 Big Mill Basic, 1 extra Timberjig, 1 extra guide rail 2.75m, 1 LSG mounting kit, 2 arm extension EXT 90cm or 120cm, 2 fixing plates EXT, 1 rack and T-bar EXT kit. Big Mill PRO is suitable for log diameters up to 105 cm with guide rail support on each side or 135 cm with LSG and bar tip steering.

Big Mill LSG

Components: 2 Timberjigs, 1 LSG kit with bar tip steering

The two timberjigs are connected to one another by means of the LSG cross bars. The first cut is taken with the help of e.g. an aluminium step ladder which you lay on top of the log. Suitable for log diameters up to 135 cm.
