

## LOG HOUSE MOULDER

# Log House Moulder for Logosol Sawmills

From log to cabin with Logosol.

PRODUCE THE SHAPES YOU WANT!

Timbering is easy as pie with Logosol's Log House Moulder. You can quickly and easily saw out a beam and shape both the top and the underside of the beam without removing the saw or the moulder from the saw bench. Knives are available for making beams that are from 3 to 8 inches thick.

With knives for Logosol's planer/

moulders you can also plane or mould. Planing the inner side of the beams, or moulding purlins and posts has turned out to be an interesting possibility.

The Log House Moulder is available with 3 or 4 kW motors. Now it is also possible to run the Log House Moulder with a petrol saw. Contact us for more information.

The Log House Moulder can be used together with Logosol's automatic feeder.
